

Boeing, Turkish Airlines celebrate its first 777 Freighter

Boeing and Turkish Airlines recently celebrated the delivery of the airline's first 777 Freighter; the world's longest-range twin-engine freighter.

The 777 Freighter is based on the 777-200 LR (Longer Range) passenger aeroplane and can fly 9,070km with a full payload of 102,000kg.

The freighter, along with another one on order, will help expand the company's cargo business.
