

New all-electric SUV from Mercedes-Benz redefines its class with elegance and technology

The Mercedes-Benz EQE SUV is a flexible electric vehicle that comes standard with a ten-module lithium-ion battery and upgradable in-house battery management software. Its aerodynamic design, which includes underbody elements, delivers a low Cd value of 0.255, giving more dynamism than the EQS SUV while still providing plenty of room.

The EQE 350 4Matic variant has a WLTP range of 461-551 km and a power output of 215kW. It incorporates several driving assistance technologies and allows over-the-air upgrades for customisation. The move to electric vehicles is highlighted by a new "Serene Breeze" acoustic experience. The EQE SUV has sophisticated battery technology and one-pedal operation.

Charging is accessible via public mains supply with a capacity of up to 22 kWh. Mercedes-Benz emphasizes the EQE SUV's compactness, elegance and dynamic driving. The suggested retail price for the EQE 350 4Matic is R2,194,500.
