The Medium-Term Expenditure Framework (MTEF), a crucial part of the annual budget preparation cycle, also showed projected GDP growth of 4.2% and inflation of 13% in 2022.

It gave a total federal government 2022 expenditure figure of 13.98tn naira (\$34.01bn) with an expected fiscal deficit of 5.62tn naira (\$13.67bn).

The MTEF was recommended for approval by a senate committee which said it was "designed deliberately to minimise the adverse socioeconomic consequences of the unabating Covid-19 pandemic and other crises peculiar to our country".

Nigeria's Dangote in talks with traders for oil refinery loan

Lagging growth in sub-Saharan Africa

Nigeria's economy, Africa's largest, contracted in 2020 due to the crisis caused by the pandemic and, although it has resumed growing, the World Bank says it is lagging growth in the rest of sub-Saharan Africa.

Growth is being hampered by security crises from Islamic insurgencies in the northeast to mass school abductions in the northwest and clashes between farmers and herders in several regions.

The Central Bank of Nigeria has estimated that GDP would grow by 2.5% to 3% this year. The World Bank has projected GDP growth of 2.1% in 2022.

Nigeria's annual inflation eased in August for a fifth straight month to 17.01%, official data showed last week. It has been in double digits since 2016.
